- Skins in 20 minutes
- Full Cure 24 hours
- Minimal Dust Attraction

### Adhesion

- Vinyl/PVC
- Wood
- Aluminum
- Sheet Metal
- Many other common construction substrates
- Fiber Glass
- Cedar
- Kynar

## A REVOLUTIONARY SEALANT

Premier Industrial Supply, Inc. of Phoenix, AZ unveils the **latest in sealant technology** with the launch of a new line of sealants and adhesives. The revolutionary XtraBond™ 9500 Hybrid Sealant was developed with the strictest quality and sealing performance properties in mind for the residential window & door, OEM and construction industries.

It is a professional grade product that has incorporated the latest advancements in sealants: The fusion of silicone technology and polyurethane technology cross linked into one high performance durable product. With its hybrid technology, this product capitalizes on the features and benefits of both technologies: The cure time and weatherability of **silicone** and the adhesion, flexibility, and 'paintability' of **polyurethane**.

Not stopping there, the XtraBond™ 9500 is fully AAMA certified, solvent free and environmentally friendly. Extra steps were taken to guarantee the product to be **non-yellowing** - a huge benefit for long term satisfaction, un-matched by the competition.
